Build Guide

These instructions will guide you through the process of setting up a Wi-Fi Test Suite UCC (Unified Communications Console) clone for the first time. We also have an automated install script for Windows 7.

Prerequisites and get the code

Make sure you have python version 2.7 installed:

https://www.python.org/download/releases/2.7/

Before continuing with this guide, make sure you have all of UCC's dependencies installed.

Clone the git repository available on github:

> # git clone https://github.com/WiFiAlliance/Wi-FiTestSuire-UCC.git

Get the code and build

Once this is done, you'll need to compile the python UCC code with a script located in the root directory.

> # buildUcc.bat

The executable wfa_ucc.exe will be generated and placed in "dist" folder. The required python binaries are also place in there as well.
